Big Program II –
Credit Card Debt

Suppose you are given a large data file (csv) with information on credit card debt for individuals in the U.S. You are tasked with writing some code to search this file for things like:

① All the people whose name starts with "Jo"

② All the people with, say, less than $5000 in credit card debt.

③ All the people from a given state.

Write some code to do this !!
